
What is the most important information I should know about omeprazole and sodium bicarbonate capsules? 

Omeprazole and sodium bicarbonate capsules may help your acid-related symptoms, but you could still have serious stomach problems. Talk with your doctor. 

Omeprazole and sodium bicarbonate capsules can cause serious side effects, including: 

- A type of kidney problem (acute interstitial nephritis). Some people who take proton pump inhibitor (PPI) medicines, including omeprazole and sodium bicarbonate capsules, may develop a kidney problem called acute interstitial nephritis that can happen at any time during treatment with omeprazole and sodium bicarbonate capsules. Call your doctor right away if you have a decrease in the amount you urinate or if you have blood in your urine. 

- Omeprazole and sodium bicarbonate capsules contain sodium bicarbonate. Long-term use of bicarbonate with calcium or milk can cause a condition called “milk-alkali syndrome.” Long-term use of sodium bicarbonate can cause a condition called “systemic alkalosis.” Talk to your doctor about any questions you may have. Too much sodium can cause swelling and weight gain. 

Tell your doctor if you are on a low-sodium diet or if you have Bartter’s Syndrome (a rare kidney disorder). Tell your doctor right away if you have confusion, shaking hands, dizziness, muscle twitching, nausea, vomiting, and numbness or tingling in the face, arms, or legs. 

- Diarrhea caused by an infection (Clostridium difficile) in your intestines. Call your doctor right away if you have watery stools or stomach pain that does not go away. You could have a few or a lot of loose, watery stools. 

- Bone fractures (hip, wrist, or spine). Bone fractures in the hip, wrist or spine may happen in people who take multiple daily doses of PPI medicines and for a longer period of time (a year or longer). Tell your doctor if you have bone fractures, especially in the hip, wrist, or spine. 

- Certain types of lupus erythematosus. Lupus erythematosus is an autoimmune disorder (the immune system attacks other cells or organs in the body). Some people who take PPI medicines, including omeprazole and sodium bicarbonate capsules, may develop certain types of lupus erythematosus or have worsening of the lupus they already have. Call your doctor right away if you have new or worsening joint pain or a rash on your cheeks or arms that gets worse in the sun. 

Talk to your doctor about your risk of these serious side effects. Omeprazole and sodium bicarbonate capsules can have other serious side effects. See “What are the possible side effects of omeprazole and sodium bicarbonate capsules?” for more information about omeprazole and sodium bicarbonate capsules that is written for you have. It may harm them. You can also ask your doctor or pharmacist for more information about omeprazole and sodium bicarbonate capsules.
