

Kyprolis® was approved by the U.S. Food and Drug Administration in July 2015, in combination with lenalidomide and dexamethasone, for the treatment of patients with relapsed multiple myeloma who have received one to three prior lines of therapy. Kyprolis® is also indicated under FDA accelerated approval as a single agent for the treatment of patients with multiple myeloma who have received at least two prior therapies including bortezomib and an immunomodulatory agent and have demonstrated disease progression on or within 60 days of completion of the last therapy. Approval is based on response rate. Clinical benefit, such as improvement in survival or symptoms, has not been verified. A form of blood cancer that arises from plasma cells, multiple myeloma usually grows in bone marrow, the soft, tissue found inside most bones where normal blood cells are produced.

BLINCYTO® is an example of immunotherapy, a treatment that uses certain parts of a person's immune system to fight diseases such as cancer. BLINCYTO® is the first approved bispecific CD19-directed CD3 T-cell engager. It engages the body's T-cells, a type of white blood cell or lymphocyte, to destroy leukemia cells. It was approved by the U.S. FDA in 2014, to treat patients with Philadelphia chromosome-negative relapsed or refractory B-cell precursor acute lymphoblastic leukemia (B-cell ALL), an uncommon form of ALL. This indication is approved under accelerated approval. Continued approval for this indication may be contingent upon verification of clinical benefit in subsequent trials.

In July, this year, the European Commission (EC) granted marketing authorisation for Repatha™, the first proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor to be approved in the world, for the treatment of patients with uncontrolled cholesterol despite taking maximum doses of statins or who cannot take statins, who require additional intensive low-density lipoprotein cholesterol (LDL-C) reduction. Elevated LDL-C or “bad” cholesterol is an abnormality of cholesterol and/or fats in the blood and is recognized as a major risk factor for cardiovascular disease.

### **About Dr. Reddy's**

Dr. Reddy's Laboratories Ltd. is an integrated pharmaceutical company, committed to accelerating access to affordable and innovative medicines, because it believes Good Health Can't Wait. Through its three businesses - Pharmaceutical Services & Active Ingredients, Global Generics and Proprietary Products – the company offers a portfolio of products and services that include active pharmaceutical ingredients, (APIs), custom pharmaceutical services, generics, biosimilars and differentiated formulations. With operations in 26 countries across the globe, the major therapeutic areas of Dr. Reddy's are gastro-intestinal, cardiovascular, diabetology, oncology, pain management and anti-infectives.
